

Testimonial from 3000 unit sow farm.

We were approached by Kevin Van Beek to try their new product By-O-Reg in our sow herd. We admit we were skeptical at first but we agreed to begin adding it to our gestation and lactation feed. We must say it began working just as he described. Within 2 months our wean to service interval was reduced by as much as 15%. The sows just started to come into heat better. My farrowing attendants also began noticing the sows farrowing faster with less stillborns and not having to assist as many sows. We have been adding By-O-Reg to feed for three months now with excellent results. We look forward to seeing additional benefits in the near future.
