

Breathe-Rite Information

Respiratory diseases are a severe health product in young and growing livestock. These issues can be caused by environmental, bacterial, or viral factors that can lead to reduced feed intake, lower overall performance, and ultimately death.

The first line of defense for all livestock is gut health. When the gut is healthy, livestock are more resilient to stressors but sometimes a little extra assistance is needed to help them BREATHE easier. Use **BREATHE-RITE** to get ahead of expected challenges such as changing weather situations, transport, and housing.

Our carefully selected natural components in **BREATHE-RITE** support your livestock's respiratory function and can help with the following:

- ✓ **Antitussive**
- ✓ **Expectorant**
- ✓ **Antimicrobial**
- ✓ **Anti-inflammatory**

Respiratory function is impacted by the swelling of the affected mucous membranes in the respiratory tract which narrows the nasal passages and makes breathing more difficult. **BREATHE-RITE** will help reduce inflammation and loosen mucus while also helping to open the sinus and nasal passages making breathing easier.
